

Dear doctor,

I am interested in carrying out a genetic test to find out more about my long-term health and would like to learn more about the PrediSpot genetic health test offered by Biocentaur.

Working from world-class facilities in Europe, Biocentaur's team of molecular biologists use the latest medical techniques to analyse DNA extracted from cells to identify variants or mutations, which can be used to predict if they are at an increased risk of developing a certain disease.

Biocentaur's PrediSpot genetic health test screens for the presence of Alzheimer's disease, asthma, Charcot-Marie-Tooth, coronary artery disease, Crohn's disease, heart attack, heart disease, hypertension, multiple sclerosis, osteoporosis, rheumatoid arthritis, Sjogren's syndrome, sudden cardiac death, systemic lupus erythematosus, thrombosis, type 1 diabetes and type 2 diabetes.

The test is appropriate for healthy adults aged 18 or over who want to learn more about their health and do not have a history of these conditions in themselves or in members of their family. I understand that if I am feeling unwell or experiencing any symptoms that are worrying me, I should talk to you or another healthcare provider about other options.

Biocentaur also offers a range of other genetic tests. You can learn more about these and Biocentaur's services at www.biocentaur.com

Yours sincerely,

To find out more about Biocentaur or to order a test on behalf of your patient, please visit www.biocentaur.com or contact us on info@biocentaur.com
