# Primespot test results

# PRIMESPOT TEST RESULTS

Dear

Please find enclosed the Primespot test results for your patient

To carry out our Primespot test, we isolated the white cells from the platelets and red cells in your patient's blood sample. The selection of white blood cells in each sub-group has been performed through cell separator using antibodies conjugated with magnetic beads.

The measuring of cytokines has been performed using gene expression profile using inflammatory markers (12K, 12X10<sup>3</sup> markers).

We hope that you find your results easy to understand. If you need any further help, please contact one of our expert advisers who will be happy to review the Primespot test results with you.

Yours sincerely,

**Dr Ioannis Papisotiriou**  
Founder and CEO  
Biocentaur

## TEST RESULTS

The results of your tests are presented in an easy-to-understand format with 'normal' or 'abnormal' shown against each response.
