

# Experts in advanced medical genetics

Launched by genetics pioneer Dr Ioannis Papasotiriou, Biocentaur delivers a range of predictive, diagnostic and targeted genetic tests to help individuals make informed decisions about their health and wellbeing. Our team of researchers and scientists work at the cutting edge of molecular biology, developing techniques that will help accurately diagnose diseases and improve outcomes for people across the world.

## We currently provide four genetic tests:

1. PrediSpot can help predict if individuals are at an increased risk of developing a range of diseases, including Alzheimer's disease, Crohn's disease, rheumatoid arthritis, type-1 and type 2 diabetes, and more.
2. PrimeSpot has been developed to accurately diagnose the presence of a range of viruses, Lyme disease and chronic fatigue syndrome.
3. PaldiSpot detects the presence of 23 of the most common strains of Borrelia, Babesia and Bartonella genospecies, and provides critical information that can inform the development of personalised treatments or therapies.
4. SNPs analyses a patient's DNA to characterise how they would respond to treatment with common anti-inflammatories, antibiotics and anticoagulants.

Biocentaur is part of the global RGCC Group, which includes genetic cancer test pioneers RGCC. Healthcare providers who wish to order any Biocentaur or RGCC test must first register with RGCC.

To find out more about RGCC and to register with us, please contact us at [info@biocentaur.com](mailto:info@biocentaur.com) or call +44 (0)1454 270319.

Thank you.
